

## FleetSoft Maintenance Software Service Requirements

- 1) Hardware requirements for on-site installation
  - a. New installations can be deployed on a server, laptop, or a standalone PC with minimum 2.0 GHz CPU (i5 3.0 GHz Processor or better recommended), at least 100+ GB available disk space (Solid State Hard Drive (SSD) recommended) and 4 GB RAM (8GB recommended). Monitor with minimum 1024x768 Screen Resolution (1920 x 1080 recommended).
  
- 2) Software requirements for on-site installation.
  - a. Supported OS versions are Windows 7, 8, 8.1, 10, (Windows 10, 64-bit recommended) Windows Server 2008, 2012 or higher.
  
- 3) Abilities to scale the system for growth
  - a. Fleetsoft Professional Plus was quoted and includes all the modules. The GPS and Telematic interface would include the ability to interface with GPS and telematics providers and is available separately.
  - b. Number of users 500+users are possible with Microsoft SQL Server
  - c. Number of SKU's and categories are unlimited except for hard drive space.

*\* All existing systems with OnCommand MIM or Truck Tracker Software versions 6.0 through 10 can be upgraded using the new FleetSoft installation and will continue to work "as is" with their existing version of SQL Server Express software.*
