FleetSoft SM

Put Your Best Fleet Forward:

Integrate GPS & Telematics Solutions with FleetSoft

What Are The Advantages?

Automatic Odometer and Hour Meters Updates

Vehicle odometers update automatically from data brought in from your GPS/Telematics provider. This helps your team flag PMs in real-time so there are no delays.

Telematics Data Sync

Filtered fault codes get sent to Fleetsoft from your GPS/Telematics provider so technicians can see current fault alerts on vehicles in service.

Current Location Map

Fleetsoft receives and translates GPS coordinates to show vehicle locations on a map.

DVIR Data Sync

Failed inspection data gets sent to Fleetsoft as a Reported Problem in real-time. Fleetsoft then warns technicians of the Reported Problem(s) in the program.

GPS/Telematics Integrations

- DQ Technologies
- Forward Thinking
